

Auto Ticket Classification using Flow Designer

Phase 3: Backend Development & Configuration

Purpose: Design and configure backend tables, fields, assignment matrices, and platform components.

Section	Details
Platform Setup	Configure required application scopes, incident forms, and data structures.
Data & Field Setup	Verify Incident table (incident) fields: Short Description, Category, Subcategory, Impact, Urgency, Priority, and Assignment Group.
Lookup Matrix / Decision Table	Create custom Lookup Decision Tables or Keyword Mapping Tables to correlate ticket keywords/phrases to specific categories and support groups.
User & Role Setup	Assign appropriate roles (itil, admin, flow_designer) to test accounts and automation accounts.

Project Note: This phase document is prepared for organizing the project evidence and can be supplemented with your actual screenshots/configuration details.
