

Auto Ticket Classification using Flow Designer

Phase 4: Flow Designer & Email Notification

Purpose: Implement the classification workflow, routing actions, and notification mechanisms.

Section	Details
Trigger Setup	Configure trigger on Incident table (incident) when a new record is created or updated where Category/Assignment Group is empty.
Flow Logic & Actions	Add decision actions to evaluate ticket description text, look up matching rules, and update Incident fields (Category, Priority, Assignment Group).
Email Notification	Configure automated email notifications to inform the assigned group/agent upon successful classification and assignment.
Implementation Result	The configured Flow Designer workflow automatically classifies incoming tickets and notifies designated support groups immediately upon creation.

Project Note: This phase document is prepared for organizing the project evidence and can be supplemented with your actual screenshots / configuration details.
