

Auto Ticket Classification using Flow Designer

Phase 6: Documentation

Purpose: Prepare complete technical, configuration, and user documentation for the completed project.

Section	Details
Project Documentation	Document project scope, routing rules, data matrices, Flow Designer execution path, and test evidence.
Configuration Documentation	Record Flow Designer triggers, lookup actions, conditional logic branches, and notification templates.
User Guide	Provide instructions for support agents on how auto-classification tags tickets and how to override automated assignments if needed.
Evidence	Include screenshots of Flow Designer configurations, flow execution context logs, incident record updates, and email notifications.

Project Note: This phase document is prepared for organizing the project evidence and can be supplemented with your actual screenshots/configuration details.
