

Auto Ticket Classification using Flow Designer

Phase 8: Presentation & Final Submission

Purpose: Present the project outcomes, demonstrate live ticket automation, and assemble final deliverables.

Section	Details
Project Presentation	Present problem statement, auto-classification architecture, decision logic, Flow Designer execution, and efficiency gains achieved.
Demonstration	Conduct live demonstration: create an incoming ticket and show real-time classification, priority setting, assignment, and email alert execution.
Submission Files	Organize Phase PDFs, flow diagrams, execution logs, screenshots, and technical documentation into the project repository.
Final Outcome	Successfully submit the completed project with structured phase documentation and verified implementation evidence.

Project Note: This phase document is prepared for organizing the project evidence and can be supplemented with your actual screenshots/configuration details.
